## **INSTRUCTIONS**

Where a single stereo pickup is used to play both stereo and monaural discs the appropriate Pickup Adaptor is identified by a single letter. Table 1 shows the recommended Pickup Adaptor to be used with various types of stereo pickup.

If a separate pickup is used to play monaural discs (the stereo pickup then being used to play stereo records only), the Pickup Adaptor is identified by two letters. The FIRST letter is determined by the stereo pickup and is obtained from Table 1. The SECOND letter is obtained from Table 2 which shows the recommendation for types of monaural pickup. If a monaural pickup only is to be used, a two-letter adaptor is still required (see columns under Table 2).

The fact that specific makes of pickup are included or used as examples, and others omitted, should not be taken to indicate pickup preference or recommendation.

Many pickups are advertised as "high fidelity" types. This is purely a relative term and it is recommended that pickups used with high grade amplifiers and loudspeakers should be specifically intended for such use.

Each control unit is supplied with a Pickup Adaptor. Should this be unsuitable for the pickups in use, the Pickup Adaptor may be exchanged free of charge during the guarantee period, either through the dealer from whom the amplifier was purchased, or in the case of difficulty, through the main distributor for the country concerned (in the U.K. The Acoustical Manufacturin; Co. Ltd.) A box in which to return the unit and a special double label are provided to facilitate exchange by post where necessary.
